The Whirlwind Guide: SGML Tools and Vendors

The purpose of this listing is to give a brief overview of SGML Tools currently available on the market.

While we would like the list to be as comprehensive as possible, we are not interested in every piece of software that claims 'SGML compatibility'. The main criterion for inclusion is that the software incorporates some kind of SGML parsing capability, or that it is in some way specifically geared to handling SGML documents. (However, certain non-SGML products that have SGML conversion toolkits bundled with them are included in the Electronic delivery and Page layout categories.) Neither does this list necessarily cover every product from a particular vendor. Ancilliary products, such as application toolkits, DTD compilers and the like, are not included.

The products in the list are arranged in a set of very broad categories that should not be taken too literally since no two tools have exactly the same functionality. (We could have carried on subdividing categories forever in order to express the finer distinctions, but we had to stop somewhere...) Bear in mind also that some products could have been listed under more than one category.

There are bound to be some inaccuracies, for which we apologise in advance. Please send corrections and additions to the address below. Updated versions of this list will be posted periodically at ftp://ftp.falch.no /pub/SGML-Tools.
